### Introduction

In March 2014, the National Resident Matching Program (NRMP) conducted its biennial survey of the directors of all programs participating in the Main Residency Match®. The primary purpose of the survey was to shed light on the factors that program directors use to (1) select applicants to interview and (2) rank applicants for the Match.

The survey was fielded during the 18 days between the rank order list deadline and Match Week so that program match outcomes would not influence respondents' answers.

The survey solicited information on:

- the number of applications received, screened, and reviewed, as well as the number of applicants interviewed and ranked
- whether the program typically interviews and ranks specific applicant groups
- use of test scores in considering which applicants to interview, and
- the factors used for both interview selection and for ranking applicants.

The overall response rate for all specialties in this report was 52.7 percent. Transitional Year and 22 specialties with 10 or more responses are included in this report. Their response rates are listed in the table below. Response rates for those specialties ranged from a high of 65.4 percent for Emergency Medicine and Pediatrics to a low of 42.6 for Radiology.

Several changes were made to the 2014 questionnaire. In the past, program directors were asked to indicate factors they used in selecting applicants to interview and to rate the importance of each factor in ranking. In this survey, program directors were asked to indicate factors they used in selecting applicants to interview and rank respectively. They were asked to rate the importance on a scale of 1 to 5 *only* for the factors they used in their selection process. In addition, this survey asked program directors how they handled unfilled positions after the 2013 Match and SOAP. Because the number of responses for that question was small, the results are only reported in the "All Specialties" section.

Numbers of responses are presented in most of the graphs. Some graphs use data from multiple survey questions. In those cases, different N's are listed. Numbers of applicants ranked and positions in the Match are extracted from the NRMP database. Graphs are suppressed for questions with fewer than five responses.

This report presents results by specialty on selected items from the survey. The NRMP hopes that program directors, medical school officials, and applicants find these data useful as they prepare for and participate in the Main Residency Match.

The NRMP's data reporting and research activities are guided by its Data Release and Research Committee. NRMP data and reports can be found at: www.nrmp.org/match-data/.

| Specialty                            | Surveys Sent | Number Responding | Response Rate |
|--------------------------------------|--------------|-------------------|---------------|
| Anesthesiology                       | 127          | 71                | 55.9%         |
